Re: Wolf Management in Washington State

History is an excellent teacher. Wyoming, Montana and Idaho have all gone through wolf management, to the point of over population. Wolves do not need humans to be successful.

Washington State's financial debt should prohibit money being spent towards wolf management. The breeding pairs in Washington State are already of sufficient numbers to be successful on their own.

At one of the meetings a young man stated: "Since when did wolves become more important than people trying to make a living," in reference to the amount of money spent; and the destruction wolves cause to hunters & livestock producers…good point.

WDFW proposed 5 Alternatives to Wolf Conservation and Management. Of those five, I support: ALTERNATIVE 4, NO ACTION – CURRENT MANAGEMENT. I am certainly opposed to the expenditure of additional State funds for wolf management, especially in this current time of budget deficits and cuts.

Please implement Alternative 4!

Sincerely,

G. Paul Miller
